

SOCIETY OF MANUFACTURING ENGINEERS

November 2023 – August 2024

Department of Industrial & Manufacturing Engineering

What is SME?

The Society of Manufacturing Engineers (SME) is the departmental society for Industrial and Manufacturing Engineering students. Its primary aim is to bridge the gap between academia and industry, helping students gain practical knowledge and skills. SME provides students with growth opportunities through hands-on experiences, including workshops, industrial visits, and seminars. These events allow students to connect with industry professionals, learn about the latest manufacturing technologies, and better prepare for their careers. Through SME, students are equipped with the practical insights and professional connections needed to thrive in the manufacturing field.
